

Service Activities of MIREL RM2 Integrated On-Board System

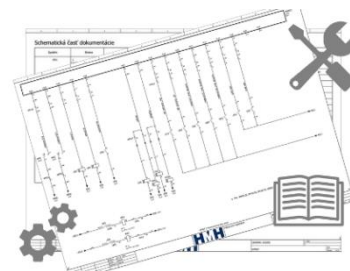

SESRM2 Type

Illustrative picture

Service activities of MIREL RM2 integrated on-board system represent a set of activities aiming the execution of scheduled and unscheduled system maintenance.

Prophylactic inspection service activities have been classified based on function properties groups of system submitted to service. Function properties have been divided into groups listed below:

- Function properties M / R / B / B1
- Function properties G / L
- Function property S

Modification of prophylactic inspection service activities is further classified depending on system central unit modality as listed below:

- System prophylactic inspection in compact version – in BOXTUG and BOXKOG structural systems
- System prophylactic inspection in basic version – in BOXU structural system

Following rules apply for prophylactic inspection time intervals:

- Interval of system prophylactic inspections after technical life expiry is 12 months, regardless of prophylactic inspection interval before technical life expiry.
- Interval of system prophylactic inspections before technical life expiry is maximally 120 months in case when previous prophylactic inspection has been accomplished in enhanced extent. Prophylactic inspection must be carried out upon next major vehicle overhaul. In specific cases, if periodicity of major vehicle overhauls exceeds 10 years period, prophylactic inspection must be accomplished after 120 months latest.
