

# Functional interface MIREL STB of the train protection system MIREL VZ1

## Type **STB**

Illustrative picture

Functional interface MIREL STB is an equipment of the MIREL modular system. Basic function of the MIREL STB is to provide an interface between the train protection MIREL VZ1 central unit and the onboard unit ETCS (function STM). This basic function is realized either by binary or serial interface.

Optionally there is an interface between the train protection MIREL VZ1 central unit and the vigilance control system (function STB). This optional function is realized either by binary or serial interface.

The basic functions of the MIREL STB is to control the transitions between the active and passive modes of the national train protection MIREL VZ1 based on the commands from on board unit ETCS and from vigilance control system.

## Overview of functions

Group	ID functions	Description
Principal functions	f_STM	Function of STM mode control
	f_STB	Function of vigilance supervision mode control
Additional functions <sup>1)</sup>	f_COM-JRU	Function of communication with recording device
	f_COM-SPD	Function of data transfer between on-board terminal and/or MIREL systems
Extending functions <sup>1)</sup>	f_MS	Interconnection of 2 MIREL STB ports in master / slave mode

<sup>1)</sup> functions can be implemented solely by means of a serial interface
